What is Claimed:

- 1           1.       A method for isolating power line distributions having a power conductor and
- 2       a neutral conductor to aid in fault distribution comprising the steps of:
- 3           identifying at least one segmentation point in the power line distribution; and
- 4           installing an impedance in the neutral conductor at the at least one segmentation
- 5       point to isolate the segment of the power line distribution.
